DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group I, claims 1-10, in the reply filed on 10/14/2005 is acknowledged. The Species Requirement filed on 09/14/2005 is hereby withdrawn per Applicant's argument that claims 1-10 are "generic".

Claim Objections

2. Claim 2 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. It appears that claim 2 contains the same limitations recited from line 10 to line 17 of claim 1.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

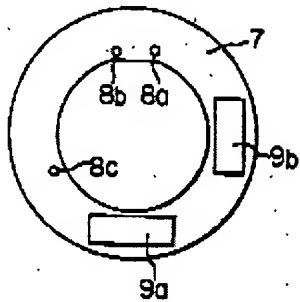

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Sato et al. 4,407,627.

Sato et al. '627 disclose a substrate positioning system per claimed invention.

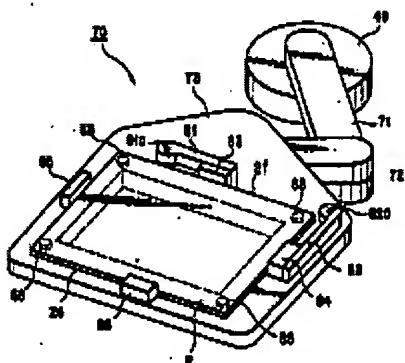

The system comprises plurality of pushing devices 9a/9b and plurality of stops 8a/8b/8c arranged in spaced relation around a stage (see figure on the next page). Pushers 9a/9b are arranged perpendicular from one another. The system comprises an inherent

controller coupled to each pushing device to cause the pushers to push the substrate against the stops 8a/8b/8c.

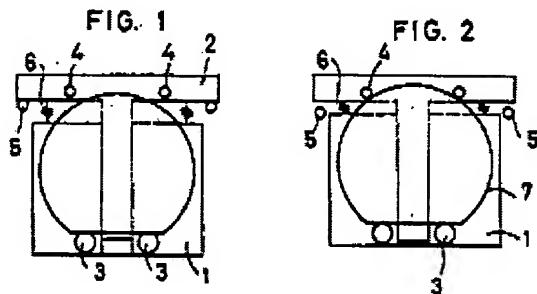

5. Claims 1-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Hikori et al. 5,374,147.

Hikori et al. '147 disclose a substrate positioning system per claimed invention. The system comprises plurality of pushing devices 81/82 and plurality of stops 85/86 arranged in spaced relation around a stage (see figure below). Pushers 81/82 are arranged perpendicular from one another. The system comprises a controller coupled to each pushing device to cause the pushers to push the substrate against the stops.

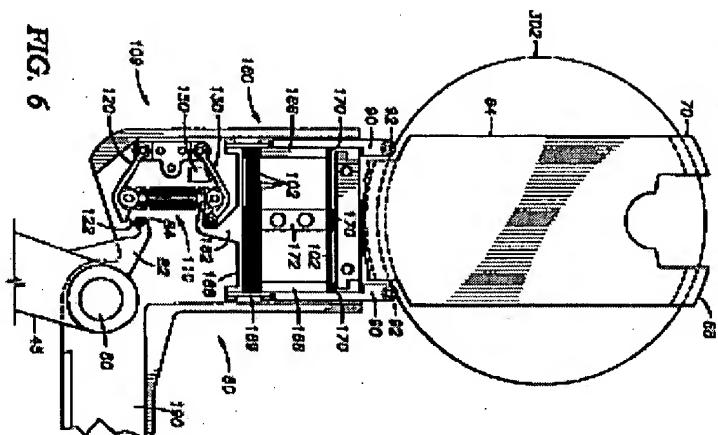

6. Claims 1-6 and 9-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Mutoh 5,484,252.

Mutoh '252 discloses a substrate positioning system per claimed invention. The system comprises plurality of pushing devices 4 and plurality of stops 3 arranged in spaced relation around a stage (see figure below). Each pusher comprises a spring 6 for biasing the pusher toward the edge of the substrate. Each pusher comprises a retracting device 14 adapted to counteract the spring. The system comprises an inherent controller coupled to each pushing device to cause the pushers to push the substrate against the stops.

7. Claims 1-6 and 9-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Ebbing et al. 6,155,773.

Ebbing et al. '773 disclose a substrate positioning system per claimed invention. The system comprises plurality of pushing devices 92 and plurality of stops 68/70 arranged in spaced relation around a stage (see figure on the next page). Each pusher comprises a spring 110 for biasing the pusher toward the edge of the substrate. Each pusher comprises a retracting device 82 adapted to counteract the spring. The system comprises a controller coupled to each pushing device to cause the pushers to push the substrate against the stops 68/70.
